

## Aluminium Single Deflection Grilles

Model Series 5100

# Aluminium Single Deflection Grilles

Models 51SV and 51SH Single Deflection Supply Grilles are recommended for applications requiring pattern adjustment in a single horizontal or vertical plane. They are generally used in a high side wall application where vertical blades will control the spread and throw distance of the air pattern to accommodate various layouts. Horizontal blades will control the rise and drop of the air pattern, typically directing warm air downwards or cool air upwards along the ceiling. The combination of streamlined 'teardrop' shaped blades and 19mm spacing maintains a high effective free area average capacity of 75%, which minimises outlet velocity, reduces pressure drop and assures quiet operation.

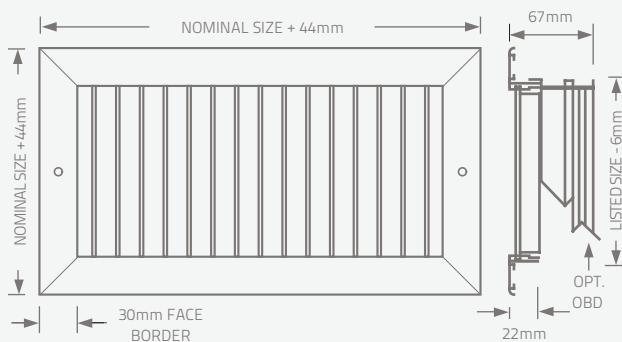

## Features:

- High quality, extruded aluminium construction.
- 30mm wide face border with a 25mm overlap margin standard, supplied with countersunk screw holes and mounting screws. NF Narrow Frame with 25mm face border optional. Concealed mounting is optional.
- Rigid extruded aluminium frames with reinforced mitred corners.
- Streamlined shaped extruded blades on 19mm centres. Blades positively hold deflection setting under all conditions of velocity and pressure.
- Integral dampers - aluminium. Opposed blade design with a screwdriver slot operator.
- Adjustable air pattern - Blades are friction pivoted and easily adjusted to provide desired spread or deflection.
- White polyester powder finish RAL 9010 semi-gloss is standard. Other finishes are available.
- Standard sizes are available from 100mm x 100mm to 1200mm x 1200mm. Other sizes are available on request but are subject to manufacturing limitations.
- Mullions are fitted on grille widths over 450mm.

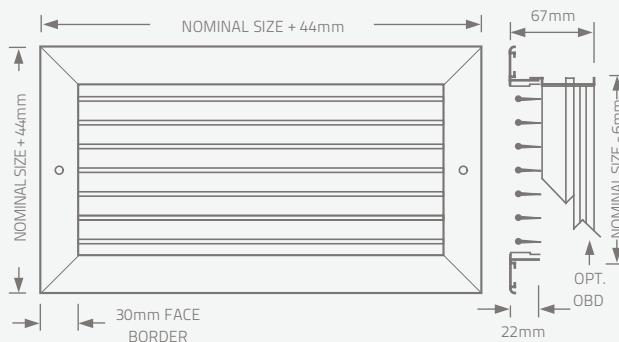

## Models:

**51SV and 51SH**  
(Suffix 'OA' adds opposed blade damper)

Model 51SV - Vertical Blades

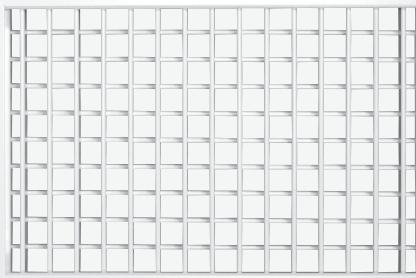

Model 51SH - Horizontal Blades

# Aluminium Double Deflection Grilles

Models 51DV and 51DH Double Deflection Grilles are recommended for application in systems requiring maximum flexibility. The front set of blades has the greatest effect on the air pattern and therefore should be selected based on particular requirements. Vertical front blades will control the spread and throw distance of the air pattern where as horizontal front blades will control the rise and drop of the air pattern, typically directing warm air downwards or cool air upwards along the ceiling.

The combination of streamlined 'teardrop' shaped blades and 19mm spacing maintains a high effective free area average capacity of 75%, which minimises outlet velocity, reduces pressure drop and assures quiet operation.

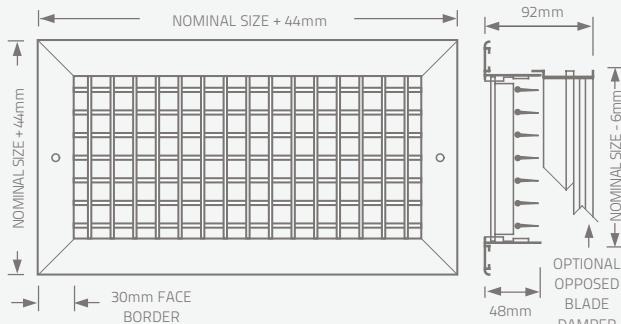

## Features:

- High quality, extruded aluminium construction.
- 30mm wide face border with a 25mm overlap margin standard, supplied with countersunk screw holes and mounting screws. NF Narrow Frame with 25mm face border optional. Concealed mounting is optional.
- Rigid extruded aluminium frames with reinforced mitred corners.
- Streamlined shaped extruded blades on 19mm centres. Blades positively hold deflection setting under all conditions of velocity and pressure.
- Integral dampers - aluminium. Opposed blade design with a screwdriver slot operator.
- Adjustable air pattern - Blades are friction pivoted and easily adjusted to provide desired spread or deflection.
- White polyester powder finish RAL 9010 semi-gloss is standard. Other finishes are available.
- Standard sizes are available from 100mm x 100mm to 1200mm x 1200mm in single section construction. Other sizes, including multiple section assemblies, are available on request but are subject to manufacturing limitations.
- Mullions are fitted to grilles above 450mm on both height and width

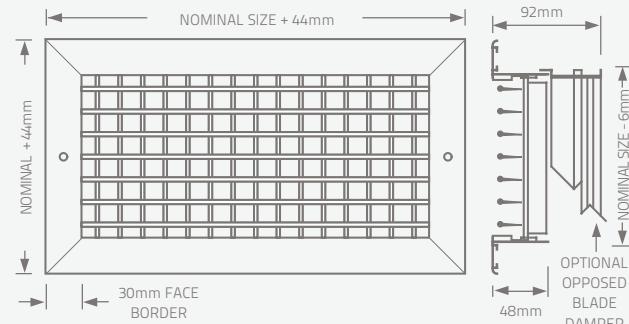

## Models: 51DV and 51DH

(Suffix 'OA' adds opposed blade damper)

Model 51DV - Vertical Blades

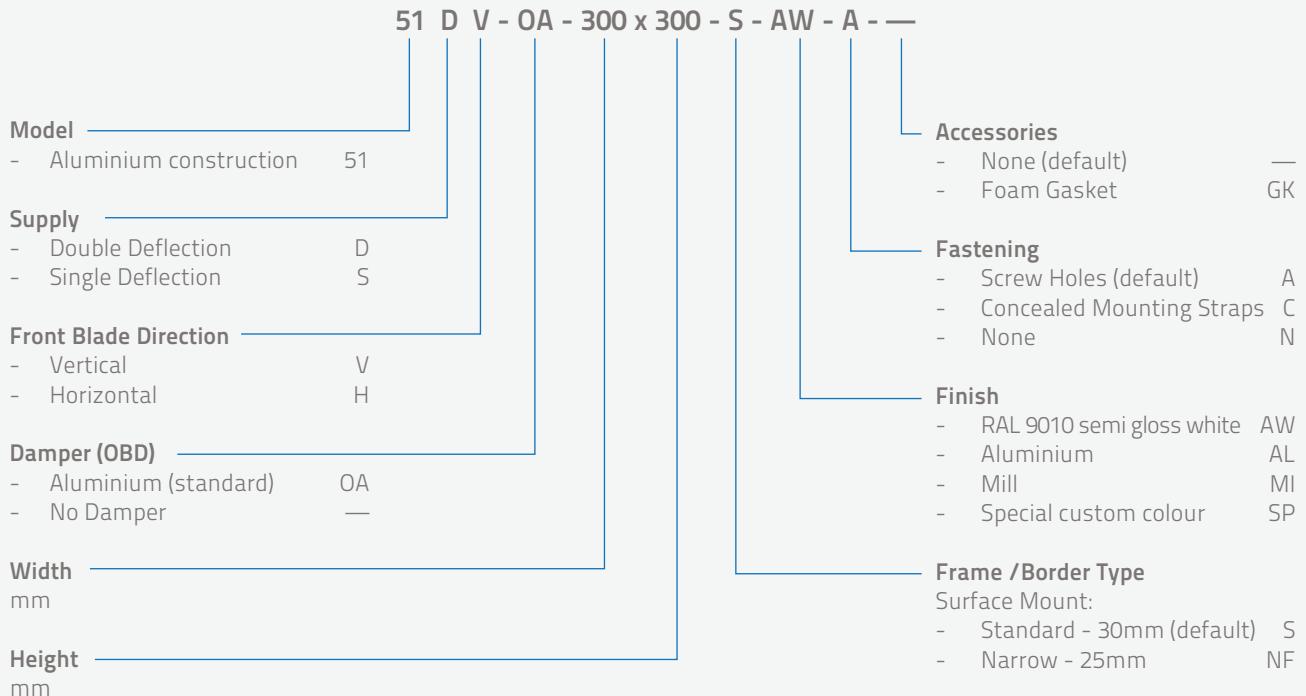

Model 51DH - Horizontal Blades

# How To Specify or To Order

## Aluminium Supply Grilles ■ Model Series 5100

(Show complete Model Number and Size, unless "Default" is desired)

### Notes:

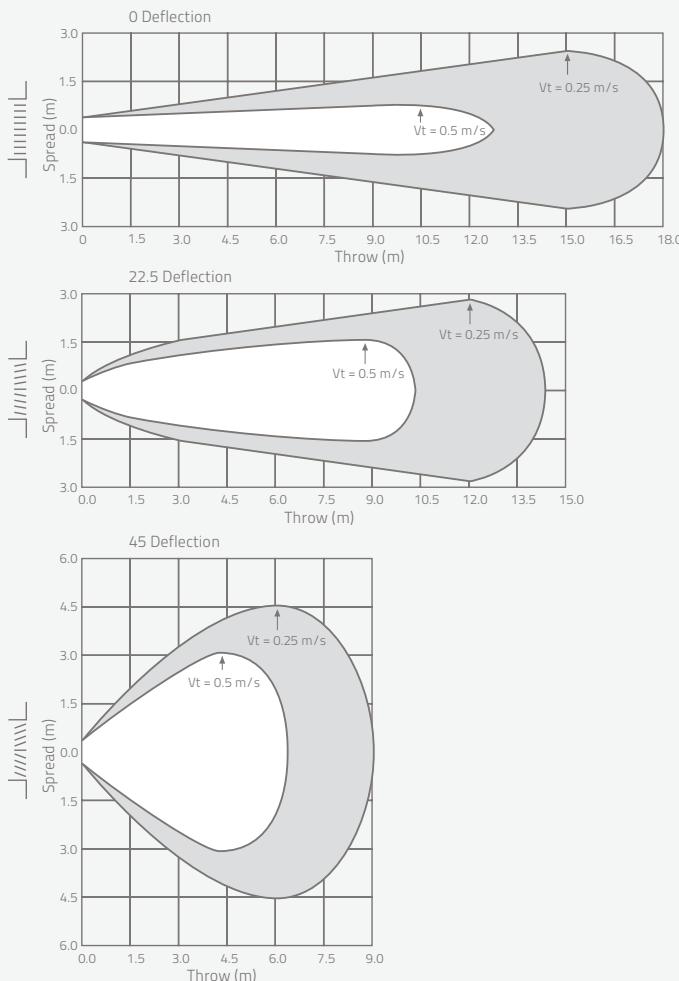

1. For a standard grille with no special requirements, specification is only required as far as the damper selection. The "default" will automatically be selected. For example, an aluminium double deflection grille, front blades vertical and damper, is Model 51DV-OA. Unit will be supplied with screw holes and AW Appliance White polyester powder finish RAL 9010 semi-gloss.

# Performance Notes for Supply Grilles

## Spread Characteristics with Three Deflection Settings

## NC Corrections for Blade Deflection (add)

Model Type	Damper	Blade Deflection 0°	22.5°	45°
Double Deflection	With	0	+ 2	+ 7
	Without	- 4	- 2	+ 3
Single Deflection	With	- 4	- 1	+ 4
	Without	- 8	- 6	+ 1

**Note:** Damper corrections are for wide open damper.

## Throw, Spread and Drop

The isovel diagrams shown below, illustrate in plan view, the relationship of horizontal spread to throw for three standard vertical blade deflections and represent a typical high side wall supply outlet. The isolvels (throw values) are for the catalogued terminal velocities (Vt) of 0.5 and 0.25 m/s.

Catalogued data, in accordance with the test code, is with the grille mounted 229mm below the ceiling and benefiting from the ceiling coanda effect under isothermal conditions. Throw values without ceiling effect (greater than 610mm from a surface parallel to the airflow) may be approximated by multiplying the catalogued throw by x 0.7.

In order to offset potential draft problems caused by premature drop, it is recommended to set the blades with an upward deflection setting of 15 - 20° in free space conditions. The angle of spread and temperature differential between the supply air and room air ( $\Delta T$ ) also effects the drop of the airstream.

Under constant conditions of temperature, volume and core velocity, the wider the spread, the smaller the drop. Typical cold supply air (-7°C  $\Delta T$ ) reduces horizontal throw by approximately 30%. Warm air will increase throw by approximately 30% and reduce drop.

## Pressure Drop Correction Factors for Grilles Without Damper (multiply)

Blade deflection	0°	22.5°	45°
Double Defl. Factor	x .80	x .83	x .89
Single Defl. Factor	x .73	x .76	x .85

## NC Corrections for Throttling Damper (add)

Additional Pressure Drop (Pa)	12.5	38	62
Approx. Damper Opening	75%	67%	50%
NC add	+ 6	+ 11	+ 18

# Air Balancing Devices

## Opposed Blade Dampers

Advanced Air Opposed Blade Dampers are manufactured from extruded aluminium blades and frame with miscellaneous steel components.

The gang operated multi-blade design with blades closing at 45 degrees permits fine volume control for accurate balancing with minimum disturbance to the airflow pattern. Blades are individually pivoted on 25mm centres.

The Opposed Blade Damper mounts directly on the neck of the grille and fits most Advanced Air grilles. Steel barbed S-clips are used for easy site mounting or removal when ordered separately. Supplied as standard with a screwdriver slot operator (Type SL) on supply grilles and a screwdriver pivot lever operator (Type PL) on fixed, angled deflection return grille. Type SL operator is standard if damper is ordered separately from grille.

Can be specified as an integral part of the grille by adding a OA suffix to the grille model.

Min. Size = 100mm x 64mm Max. Size = 600 x 600mm

## Type SL Operator

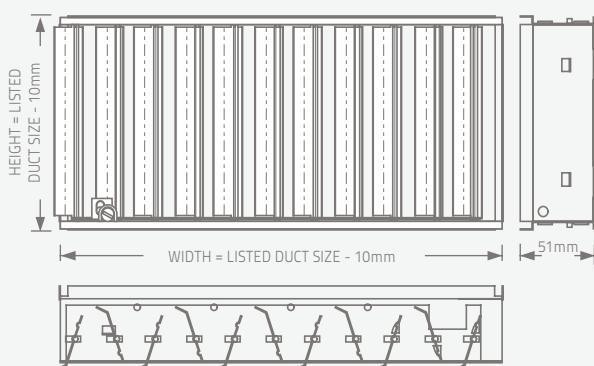

The SL Operator incorporates a screwdriver slot, which adjusts from the face of the grille. This operator is the standard supplied with supply air grilles such as the single and double deflection adjustable blade.

## Type PL Operator

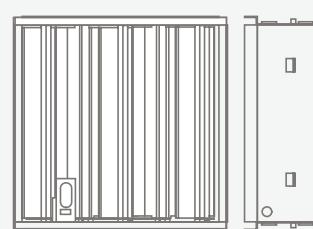

The PL Operator is a concealed pivot lever, which is adjusted from the face of the grille using a screwdriver. This operator is for use only on fixed blade, angled deflection, return air grilles. When specifying, the blade orientation of the damper must be opposite of the grille.

Model OBD Type SL (Screwdriver Slot)

Grille Mount – Face Operator

Type PL (Pivot Lever)

# Plenums ▪ For Grilles and Diffusers

Plenum boxes are designed to give even airflow across the Advanced Air range of grilles and diffusers.

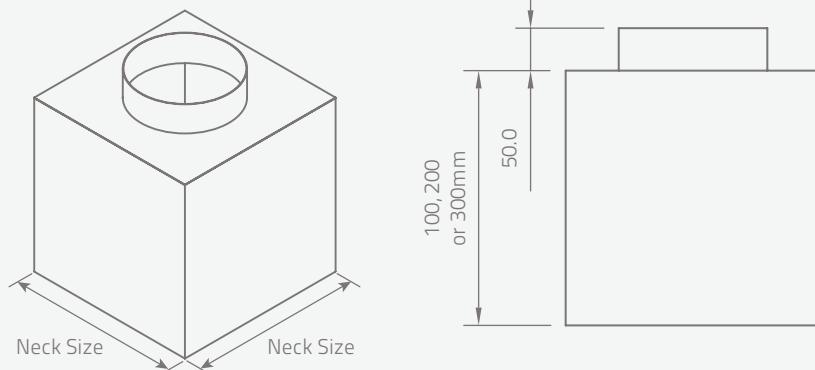

Manufactured from 0.6 to 0.8mm galvanised mild steel, the plenum boxes come with a range of spigots suitable for rectangular, circular or flat oval duct connections in either side or top entry applications. Plenums are supplied flangeless as standard. Flanges and fixing angles for drop rod/hanging support are optional extras. Concealed fixed plenums are also available on certain products, please contact Advanced Air sales for further details.

Plenums can also be supplied with optional balancing devices and thermal/acoustic lining where required. Plenum internals are natural finish as standard but optional matt black internal finish is available.

Please contact Advanced Air Sales for further details, or for bespoke solutions.

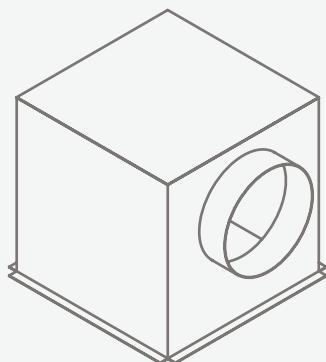

- **Rectangular, Circular or Flat Oval Duct Connections**
- **Flanges & Fixing Angles Available**
- **Thermal/Acoustic Lining Option**
- **Variety of Finishes Available**

## Top Entry

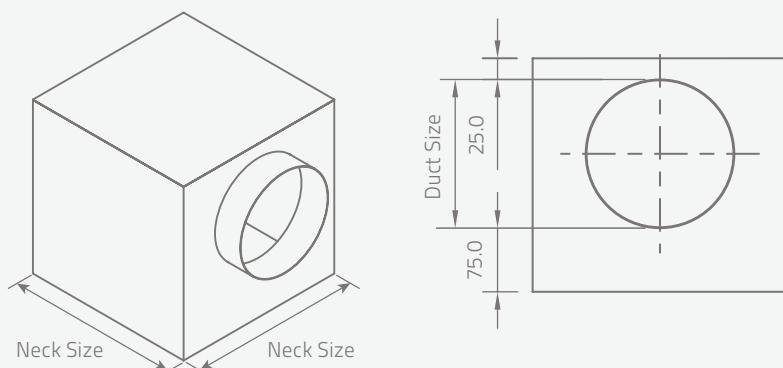

## Flanges

15mm wide flanges are available.

## Side Entry

### Note:

As standard side entry plenum height is determined by specified spigot size, alternatively, overall height can be specified. Please contact Advanced Air sales for more details.
